

ENVIRONMENTAL PRODUCT DECLARATION

Products:**Nova Charging Stations****No. 39 Longhui Road, Wujin District,
Changzhou City, Jiangsu Province, P.R. China****In accordance with ISO 14025 and EN 50693**

Program Operator	EPDIItaly
Publisher	EPDIItaly

Declaration Number	WBDE20240129V3
Registration Number	EPDITALY0602

Issue date	<u>27 / 03 / 2024</u>
Valid to	<u>27 / 03 / 2029</u>

Nova V2 DCST-EN-002-240-01(DC2400EN08801+DC3600EN07401)

GENERAL INFORMATION

EPD OWNER

Name of the company	Wanbang Digital Energy Co., Ltd.
Registered office	Wanbang Digital Energy Co., Ltd.
The address of the registered office	No. 39 Longhui Road, Wujin District, Changzhou City, Jiangsu Province, P.R. China
Contacts for information on the EPD	Chengxia Lu +86 15906111820 mail to: Chengxia.Lu@wbstar.com

INFORMATION ON THE EPD

EPD Type	Specific Product EPD
Product name (s)	Nova Charging Stations: 1. DCST-EN-002-240-01 (DC2400EN08801+DC3600EN07401) 2. DCST-EN-002-240-01 (DC2400EN08801+DC3600EN07402) 3. DCST-EN-002-360-05 (DC3600EN0004F0001+DC3600EN07401) 4. DCST-EN-002-360-05 (DC3600EN0004F0001+DC3600EN07402) 5. DCST-EN-002-360-05 (DC3600EN0004F0001+DC3600EN04302F0005) 6. DCST-EN-002-360-05 (DC3600EN0004F0001+DC3600EN04302F0006) 7. DCST-EN-002-360-05 (DC3600EN0004F0001+DC3600EN07201)
Site (s)	No. 39 Longhui Road, Wujin District, Changzhou City, Jiangsu Province, P.R. China
Short description and technical information of the product (s)	Nova Charging Stations with 20-year life span, AC 400Vac±10%, Multiphase
Field of application of the product (s)	Electronic and electrical products and systems-Charging Stations
Product (s) reference standards (if any)	
CPC Code (number)	4621 « electricity distributor or control apparatus »
LCA Consultant	The LCA report is written by: TÜV Rheinland (China) Ltd. www.tuv.com Contact person: Sharon Ye sharon.ye@tuv.com

PURPOSE & EMBEDDING SUSTAINABILITY

Wanbang Digital Energy Co., Ltd. (The abbreviation is Star Charge) is in the process of seeking their own survival and sustainable development. Star Charge considers achieving the goal of enterprise management and improve enterprise market position, and to keep the enterprise in the leading field of competition and the future expansion of the business environment always maintain sustained earnings growth and improvement of ability, ensure longevity enterprise for a long time.

GENERAL INFORMATION

Star Charge is the head unicorn in the field of digital energy in Asia, and one of the core brands of Wanbang Digital Energy. It provides equipment, platform, user and data operation services for global customers, and builds a user charging full life cycle platform with the help of vehicle sales, private charging, public charging, financial insurance and other businesses. Through the corporate strategy of "one end energy interconnection, one end industry interconnection", finally realize the long-term dream of "promoting the electrification of human transportation and leading the digitalization of global energy". Star Charge has been awarded the National Energy Administration "Energy Internet Major Application Demonstration" project, the National Ministry of Industry and Information Technology "Intelligent Manufacturing 2025 New Model Application" project, the National Ministry of Science and Technology key research and development project, the Ministry of Industry and Information Technology green manufacturing system integration project and other national projects, selected as a national demonstration platform, and led the establishment of new energy vehicle smart energy equipment innovation center, has also obtained a very professional gold content of ASPICE CL1 certification, IATF16949 and VDA6.3 certification, continued to apply for more than 400 R & D patents.

Star Charge is the world's more than 60 well-known car companies charging ecological strategic partner, as the charging field of the national standard formulation unit, Star Charge participated in the drafting of all domestic charging standards, and as a Chinese representative to participate in the drafting of IEC international standards, but also the National Standards Committee designated one of the two leading units of domestic high-power charging. In 2020, Star Charge first proposed the concept of "mobile energy network": a time-ubiquitous energy interconnection network built by mobile transportation, mobile energy carriers, mobile replenishing facilities and mobile communication terminals.

Innovative "Cloud Pipe End" that is, "Hardware + Software + Service" business model, called the digital energy ecology of China sample. In improving energy efficiency, promoting structural adjustment and energy conservation and emission reduction, helping the national automobile industry to stand on top of the world, and promoting the development and growth of the national new energy industry, Star Charge will always spare no effort.

In terms of product quality, obtained ISO9001&IATF16949 quality system certification. In terms of supplier selection, VDA6.3 audit and annual review of supplier quality are adopted to continuously improve supplier process and product quality. Continuous improvement of product quality through internal audit, such as process audit, system audit, product audit, layered process audit, etc., and establish Six Sigma projects, QCC

projects and lean improvement every year to find improvement space, improve product quality and increase product profits. According to customer requirements and company development, Star Charging has also obtained more than 20 system certifications such as ISO14001, ISO5001, SA8000, QC080000, ISO14064, ASPICE CL1 certification. At the same time, in the product certification, we have obtained CQC certification, CE certification, CB certification, UL certification, EV-Ready certification, PTB certification and other major certifications inboard and abroad, and our products implement important domestic and international standards, and become an Asian unicorn.

Star Charge is committed to providing customers with satisfactory products and solutions through continuous innovation and unremitting pursuit of high quality to bring people a more comfortable and convenient life.

As a responsible company to society and environment, Star Charge applied EPD Italy, conducted LCA study, and is willing to disclosure the actual environmental impact to the public and customers for Charging Stations products.

Declared in this EPD includes the following products and for each product the characteristics and composition were listed below.

Table 1 LCA study related types of Nova Charging Stations

DECLARED UNIT (FUNCTIONAL UNIT)

The declared unit is specified in 1 pcs of Nova Charging Stations. The functional unit is per pcs of Nova Charging Stations with a RSL of 20 years.

SYSTEM BOUNDARIES

The life cycle of the Charging Stations, is a “from cradle to grave” analysis and covers the following main life cycle stages.

The following table shows the stages of the product life cycle and the information stages according to EN 50693 and PCR EPDIItaly007 and EPDIItaly017 for the evaluation of electronic and electrical products and systems.

Table 4 System boundaries

MANUFACTURING STAGE		DISTRIBUTION STAGE	INSTALLATION STAGE	USE & Maintenance STAGE	END-OF-LIFE STAGE De-installation
UPSTREAM MODULE	CORE MODULE	DOWNSTREAM MODULE			
extraction of raw materials, including waste recycling processes and the production of semi-finished and ancillary products	manufacturing of the product constituents, including all the stages				
transportation of raw materials to the manufacturing company	product assembly				IN ACCORDANCE WITH EN 50693
	packaging				
	waste handling processes				

The stages of the product life cycle and the information considered for the evaluation are:

- Manufacturing upstream includes raw materials, and production activities of suppliers, including transport of semi-finished items and subassemblies to Star Charge.
- Manufacturing core includes local consumptions due to manufacturing of the products, the relevant assembling and waste due to manufacturing.
- The distribution stage includes the impacts related to the distribution of the product from manufacture to the logistic center of the receivers.
- The installation stage includes the impact related to the transportation of packaging waste to recycling place.
- The use stages include the impact related to energy consumption during the service life of the product.
- End of life includes the transportation and operations for the disposal of the product at the end of its service life.

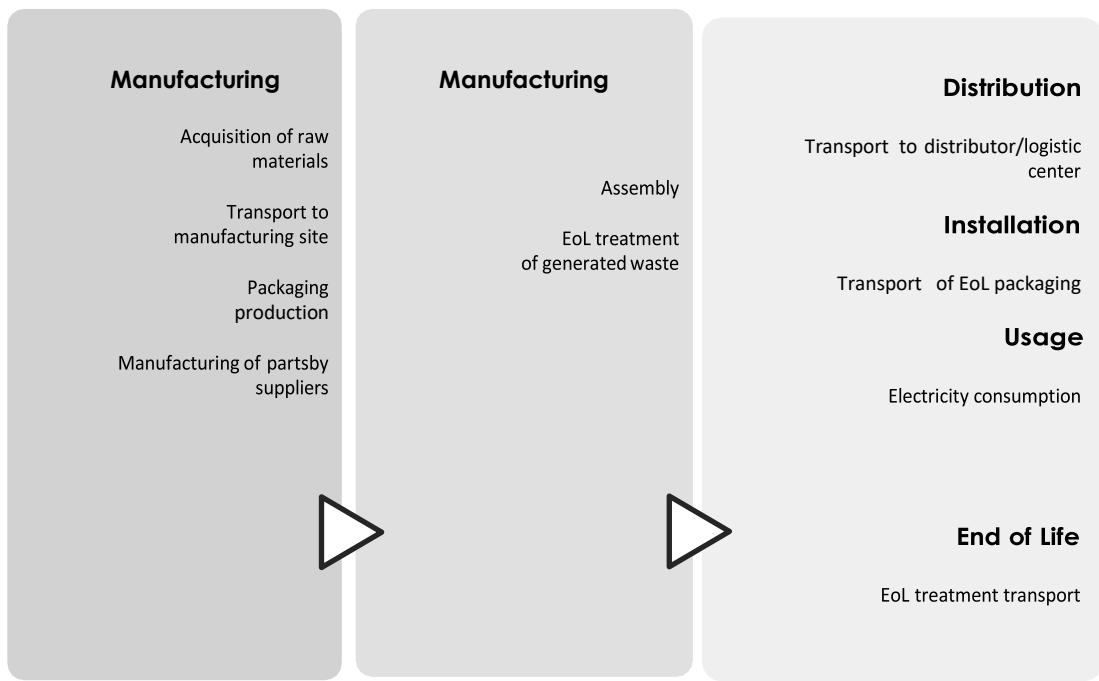

Figure 1 System boundary

TEMPORAL AND GEOGRAPHICAL BOUNDARIES

The Star Charge's component suppliers are sourced: China. All primary data collected from Star Charge factory are from July 2022 to June 2023.

The selected Ecoinvent processes in the LCA model have a global representativeness, due to the unclear origin of each component. In this way, the conservative approach is adopted.

BOUNDARIES IN THE LIFE CYCLE

As indicated in the PCR EPDIItaly, capital goods, such as buildings, machinery, tools and infrastructure, the packaging for internal transport which cannot be allocated directly to the production of the reference product, may be excluded from the system boundary.

DATA QUALITY

In this EPD, both primary and secondary data are used. Site specific foreground data have been provided by Star Charge. Main data sources are the bill of materials or weighting photos available on the enterprise resource planning. For all processes for which primary are not available, generic data originating from the Ecoinvent v3.9.1 database, allocation cut-off by classification, are used. The Ecoinvent database is available in the SimaPro 9.5.0.0 software used for the calculations.

ENVIRONMENTAL IMPACT INDICATORS

The information obtained from the inventory analysis is aggregated according to the effects related to the various environmental issues. According to PCR EPDIItaly007 PCR, EPDIItaly017 and EN 50693 the environmental impact indicators must be determined using the characterization factors and impact assessment methods specified in EN 15804 + A2 Method V1.02.

PCR EPDIItaly007, EPDIItaly017 and the EN 50693 standard establish four indicators for climate impact (GWP-GHG): GWP (total) which includes all greenhouse gases; GWP (fossil fuels); GWP(biogenic carbon) which includes the emissions and absorption of biogenic carbon dioxide and biogenic carbon stored in the product; GWP (land use).

Table 5 Impact indicators used in EPD

Impact category	Unit of measurement
ENVIRONMENTAL IMPACT DESCRIPTIVE PARAMETERS	
Climate change	kg CO ₂ eq
Climate change - Biogenic	kg CO ₂ eq
Climate change - Fossil	kg CO ₂ eq
Climate change - Land use and land use change	kg CO ₂ eq
Eutrophication, marine	kg N eq
Ozone depletion	kg CFC11 eq
Acidification	mol H ⁺ eq
Eutrophication aquatic freshwater	kg P eq
Eutrophication aquatic marine	kg N eq
Eutrophication terrestrial	mol N eq
Photochemical ozone formation	kg NMVOC eq
Depletion of abiotic resources – minerals and metals	kg Sb eq
Depletion of abiotic resources – fossil fuels	MJ
Water use	m ³
PARAMETERS DESCRIBING RESOURCE USE	

Use of non-renewable primary energy excluding nonrenewable primary energy resources used as raw material (PENRE)	MJ
Use of renewable primary energy excluding renewable primary energy resources used as raw material (PERE)	MJ
Use of non-renewable primary energy resources used as raw material (PENRM)	MJ
Use of renewable primary energy resources used as raw material (PERM)	MJ
Total use of non-renewable primary energy resources (primary energy and primary energy resources used as raw materials) (PENRT)	MJ
Total use of renewable primary energy resources (primary energy and primary energy resources used as raw materials) (PERT)	MJ
Net use of fresh water (FW)	m3
Use of secondary materials (MS)	kg
Use of renewable secondary fuels (RSF)	MJ
Use of non-renewable secondary fuels (NRSF)	MJ
WASTE PRODUCTION DESCRIPTIVE PARAMETERS	
Hazardous waste disposed (HWD)	HWD (kg)
Non-hazardous waste disposed (NHWD)	NHWD (kg)
Radioactive waste disposed (RWD)	RWD (kg)
Materials for energy recovery (MER)	MER (kg)
Material for recycling (MFR)	MFR (kg)
Components for reuse (CRU)	CRU (kg)
Exported thermal energy (ETE)	ETE (MJ)
Exported electricity energy (EEE)	EEE (MJ)

As for the calculation of each impact indicators adopted according with SimaPro help center document "How to calculate EN 15804:A2 indicators in desktop SimaPro" and we can find more explanation in LCA report.

ALLOCATION RULES

The energy demand for product line for products is allocated by yield based on total production amount from 2022.07.01 till 2023.06.30.

In the system studied, there is no co-product which is defined as "Partitioning the input or output flows of a process or a product system between the product system under study and one or more other product systems." [Source: ISO 14044:2006]. Therefore, there is no co-product allocation.

LIMITATIONS AND SIMPLIFICATIONS

The data of energy consumption and pollutants emission in the raw material acquisition stage are from the Ecoinvent 3.9.1 database published by the European Ecoinvent Center.

The emission factor of China electricity is from the Ecoinvent 3.9.1 database. This dataset has been extrapolated from year 2015 to the year of the calculation (2020). China state grid launched the green electricity program in late of 2021, however, the green electricity selling information is not public available when creating this LCA report. Thus we use the Ecoinvent data base data for China electricity [Electricity,

high voltage {CN} | market group for | Cut-off, S] is deemed conservative as this value is higher than the reality.

INVENTORY ANALYSIS

The Ecoinvent v3.9.1 by classification system processes are used to model the background system of the processes.

Due to the large amounts of components in the module, raw material inputs are modelled with data from Ecoinvent representing a global market coverage. These datasets are assumed to be representative.

MANUFACTURING STAGE

18/8 steel is the most frequently used material, followed by copper. . As for the electricity consumed during the manufacturing plant, we assessed the consumption from 2 parts, one is the PCBA process consumption, and another part is the assembly of the whole products. For PCBA process energy consumption was metered in the workshop and the electricity was allocated by output in Pieces during the data period, then PCBA process energy consumption was computed based on the No. of designated PCBA assembled in specified Charging station. And the electricity used for assembly of the whole product was allocated by output in watt. which is the unit used for output capacity. the detailed information for PCBA amount and energy allocation please refer to the below table:

#	Product series	Model	Efficiency/kw	Amount of PCBA/pcs	Average electricity consumptionkw/pcs
1	Nova	DCST-EN-002-240-01(DC2400EN08801+DC3600EN07401)	240	21	91.3527
2		DCST-EN-002-240-01(DC2400EN08801+DC3600EN07402)	240	20	89.4460
3		DCST-EN-002-360-05(DC3600EN0004F0001+DC3600EN07401)	360	21	117.0086
4		DCST-EN-002-360-05(DC3600EN0004F0001+DC3600EN07402)	360	20	115.1019
5		DCST-EN-002-360-05(DC3600EN0004F0001+DC3600EN04302F0005)	360	22	118.9153
6		DCST-EN-002-360-05(DC3600EN0004F0001+DC3600EN04302F0006)	360	22	118.9153
7		DCST-EN-002-360-05(DC3600EN0004F0001+DC3600EN07201)	360	24	122.7287

The packaging (Plywood etc.) are also included in the analysis in the manufacturing stage-core. Star Charge receives packaging components from outside suppliers and packages the module before shipping them.

The transport distances and weight from raw materials suppliers to the manufacturing are assumed as below:

Item	Model	By truck distance	Unit
1	DCST-EN-002-240-01(DC2400EN08801+DC3600EN07401)	255.6061	t km/p

2	DCST-EN-002-240-01(DC2400EN08801+DC3600EN07402)	247.8261	t km/p
3	DCST-EN-002-360-05(DC3600EN0004F0001+DC3600EN07401)	348.9375	t km/p
4	DCST-EN-002-360-05(DC3600EN0004F0001+DC3600EN07402)	341.1480	t km/p
5	DCST-EN-002-360-05(DC3600EN0004F0001+DC3600EN04302F0005)	353.3572	t km/p
6	DCST-EN-002-360-05(DC3600EN0004F0001+DC3600EN04302F0006)	349.1543	t km/p
7	DCST-EN-002-360-05(DC3600EN0004F0001+DC3600EN07201)	339.7476	t km/p

“Transport, freight, lorry, unspecified {GLO} | market for | Cut-off, S;” is used

The manufacturing of the product is located in Star Charge factory of Wujin District No.39 Longhui Rd, Changzhou, Jiangsu, China. In the factory, the different components and subassemblies are assembled to abroad.

For the manufacturing phase, the general China high voltage electricity mix from Ecoinvent v3.9.1 is used.

DISTRIBUTION

The transport distances from the plant to the place of use are shown as below: However, the data source is from <https://sea-distances.org/>

Table 6 Transportation activity data

Item	Model	By truck distance	By ship distance	Unit
1	DCST-EN-002-240-01(DC2400EN08801+DC3600EN07401)	679.1641	23802.9981	t km/p
2	DCST-EN-002-240-01(DC2400EN08801+DC3600EN07402)	676.9734	23726.2200	t km/p
3	DCST-EN-002-360-05(DC3600EN0004F0001+DC3600EN07401)	714.8312	25053.0380	t km/p
4	DCST-EN-002-360-05(DC3600EN0004F0001+DC3600EN07402)	712.6380	24976.1723	t km/p
5	DCST-EN-002-360-05(DC3600EN0004F0001+DC3600EN04302F0005)	715.1658	25064.7670	t km/p

7	DCST-EN-002-360-05(DC3600EN0004F0001+DC3600EN07201)	728.4696	25531.0293	t km/p

USE

Use and maintenance are modelled according to the PCR EPDIItaly017. Market: worldwide, mainly Italy, Spain, Romania, UK, Germany, France, Hungary, Bulgaria, Israel.

As for the Puse, the Puse is base on measured data. The operation steps are as follows:

1. Connect the input side of the whole pile with the power analyzer;
2. The charging pile return to the standby state (disconnect the AC contactor, other auxiliary circuits remain connected);
3. Read the active power value on the power analyzer, this active power value is Puse.

And the Puse test result please see below table:

Table 7 The Puse tested result

Product series	Certified model	Stand-by power Consumption Active Power (W)
Nova V2	DCST-EN-002-240-01 (DC2400EN08801+DC3600EN07401)	77.49
Nova V2	DCST-EN-002-240-01 (DC2400EN08801+DC3600EN07402)	77.49
Nova V2	DCST-EN-002-360-05 (DC3600EN0004F0001+DC3600EN07401)	77.49
Nova V2	DCST-EN-002-360-05 (DC3600EN0004F0001+DC3600EN07402)	77.49
Nova V2	DCST-EN-002-360-05 (DC3600EN0004F0001+DC3600EN04302F0005)	77.49
Nova V2	DCST-EN-002-360-05 (DC3600EN0004F0001+DC3600EN04302F0006)	77.49
Nova V2	DCST-EN-002-360-05 (DC3600EN0004F0001+DC3600EN07201)	77.49

As for the electricity consumption, according to the calculation formula in PCR, and RSL=20, we can calculate the Euse of each product. The calculation formula as below:

$$E_{use} [kWh] = \frac{P_{use} * 8760 * RSL}{1000}$$

Therefore, here are the summary data of each charging stations during use phase.

Table 8 Data list of 76.8NESP Module

END OF LIFE

The end-of-life stage is modelled according to PCR EPDIItaly017 and WEEE Directive(2012/19/EU). The percentages for end-of-life treatments of the products are taken from WEEE Directive(2012/19/EU). The disposal rate and recycling rate of each material are followed the specific data fro EN 50693 2019.

Here is the table of the summary disposal material amount of each charging stations during end-of-life:

Table 9 Disposal material consumption of Nova Charging station

ENVIRONMENTAL INDICATORS

The following tables show the environmental impact indicators of the life cycle of a Nova Charge Station, as indicated by PCR EPDIItaly007, sub-PCR EPDIItaly017 and EN 50693:2019.

The indicators are divided into the contribution of the processes to the different modules (upstream, core and downstream) and stages (manufacturing, distribution, use and end-of-life).

Table 10 Environmental impacts of per pcs of Nova V2 Charge Station: DCST-EN-002-240-01 (DC2400EN08801+DC3600EN07401)
