In this study, monocrystalline PV modules, series FUXXXM Silk[®] Plus were analyzed. The declaration covers the power peak range of 400-410 Wp.

The assessment followed the EPDItaly Program in accordance with standards (ISO 14040 and 14044) and other reference documents already cited in the introduction (PCR EPDItaly014 - Electricity Produced By Photovoltaic Modules). The PCR identifies and records: the objective and scope of LCA-based information for the product category; the rules for producing additional environmental information; the life cycle stages to be included; the parameters to consider and how the data should be collected and communicated in a report.

EPD Type	This EPD is an average product EPD. The declaration covers in total 1 series of PV modules: FUXXXM Silk® Plus (400-410 Wp). The EPD followed a cradle to grave approach.
Geographical validity	The assessment was carried out in relation to the production site in Taizhou (China) and the installation site Nulvi (SS) Italy.
Database	Ecoinvent 3.8
Software	SimaPro 9.4

FuturaSun srl

FuturaSun was established in 2008 by a team of managers in Veneto, Italy's hub of the photovoltaic industry. The headquarters are located in Cittadella, Padua Province. This is where its growth began, not only in Italy but in foreign markets too. Today FuturaSun sells in over 70 countries.

The main production plants are in Asia, north of Shanghai, and distribution expands into South America, Africa, Asia and 30 European countries. The company holds various certifications for its Taizhou plant, according to ISO 9001, ISO14001 and ISO45001 standards.

GOAL AND SCOPE OF THE STUDY

The FU XXX M Silk[®] Plus panel is a monocrystalline silicon photovoltaic module with a peak power range varying from 400 to 410 Wp. The panel is produced in the Chinese FuturaSun factory located in Taizhou, near Shanghai, and then distributed through the various ports in Europe and in non-European countries.

In the production process the main stages are:

- 1. Cell cutting;
- 2. Soldering of the cells;
- 3. Soldering of strings;
- 4. Layup of the various layers: glass, first layer of encapsulant, soldered strings, second layer of encapsulant and backsheet
- 5. Lamination;
- 6. Trimming;
- 7. Framing of the laminate;
- 8. Junction box gluing and curing;
- 9. EL&IV Test;
- 10. Packaging.

The alluminum frame is also available in black colour. The backsheet is available in white and black colour.

In this study, after production, the modules are transported to the plant site. The system is installed on a roof, anchored with aluminum bars, made up of corrugated sheet. The end-of-life scenario includes landfill, incineration, and recycling with varying percentages for the different types of materials.

This study considers the life cycle of the product, from the extraction of raw materials to disposal and disposal at the end of its life, according to the cradle to grave approach. Table 2 and Figure 1 show the modules included in the evaluation, in accordance with the PCR and the reference technical regulations.

Life cycle stages according to PCR EPDItaly014	Life cycle stages according to EN50693		ycle stages according to 804:2012+A2:2019	Cradle to grave
Upstream module	Manufacturing stage	A1	Raw material supply	х
		A2	Transport (to the manufacturer)	х
		A3	Manufacturing	х
	Distribution stage	A4	Transport to installation site	х
	Installation stage	A5	Construction - installation process	х
	Use stage	B1	Use	MND
		B2	Maintenance	х
Care madula		B3	Repair	MND
Core module		B4	Replacement	х
		B5	Refurbishment	MND
		B6	Operational energy use	MND
		B7	Operational water use	MND

PRODUCT FEATURES AND COMPONENTS

The construction, dimensions and technical parameters of the modules are detailed below (all data provided by Futurasun srl).

Table 1 shows components and total weight of the module.

Material	FUXXXM Silk [®] Plus	Unit		
Solar cell	0,59	kg/panel		
Tempered glass	14,45	kg/panel		
EVA	1,71	kg/panel		
PET	0,86	kg/panel		
Aluminium frame	2,00	kg/panel		
Junction box	0,21	kg/panel		
Other	0,98	kg/panel		
Module total weight	20,8	kg/panel		

Table 1 Components and total weight

Table 2 shows the module technical parameters and specifically the mechanical and electrical parameter.

Table 2 Mechanical and technical parameter				
Parameter	FUXXXM Silk [®] Plus			
Power output range	400-410 W _p			
Power Tolerance of P _{max}	+/- 3%			
Module Efficiency (STC)	20,48 - 21,00%			
Maximum Power Voltage V _{mpp}	31,01 - 31,36 V			
Maximum Power Current Impp	12,90 – 13,08 A			
Dimensions	1722 x 1134 x 30 mm			
Cells	108 monocrystalline half-cut MBB PERC cells			
Cells	182 x 91 mm			

Table 2 Mechanical and technical parameter

METHODOLOGY

The methodology followed as a reference standard is that of the Life Cycle Assessment, which considers all environmental aspects and potential environmental impacts along the life cycle of the product, from the extraction and transport of raw materials through manufacture and use, up to at the end of life.

FUNCTIONAL UNIT

The functional unit of the study is 1 kWh of electricity generated as output from the solar photovoltaic plant, as determined by the PCR. For the calculation of the total energy produced by the panel, the following data are considered (Table 3). To obtain the value of energy produced annually by the plant, the efficiency of the panel and the following losses were considered:

- system, i.e. the energy used by the equipment present in the system (inverter, transformer and distribution losses);

- due to aging of the panel, which lead to a decrease in the efficiency during the useful life.

The value relating to the system losses was extrapolated from the technical report carried out for the construction of the photovoltaic system and is equal to 20%, while the losses due to aging of the panel were taken from the technical data sheet of the panel, which declared a maintenance of the performance of 87% for the first 25 years.

The total medium energy produced by the plant during its useful life (30 years) is equal to 4.144.785,71 kWh.

Table 3 Power plant informations

Parameter	Value	Unit
Peak power of the plant	99,75	kW
Plant latitude and longitude	40.784, 8.744	o
Plant altitude	478	m
Nominal solar irradiance	1.896,65	kWh/m²/year

The phases used in the definition of the average impact for Silk[®] Plus panels with a peak power range of 400-410 Wp are summarized below:

- 1. Life cycle modeling of single 400-405-410 Wp panels;
- 2. Calculation of the impact of the individual panels using Simapro software;
- 3. Arithmetic mean calculated for each impact category.

ALLOCATION AND CUT-OFF

The primary and secondary data used to calculate the results were allocated to the functional unit of 1 kWh of electricity produced on the basis of the producibility of the panel over the useful life considered (30 years).

The calculation relating to electricity consumption for the production of panels and company waste was carried out considering the total m² of panels produced and the surface area of the module, equal to 1,95 m².

The following cut-offs were made in the present study:

- production of buildings, machinery, equipment;

- in the production phase the paper used in the panels and the alcohol used for the final cleaning of the panel were not considered since they are insignificant quantities;

- electricity consumption was not considered during the installation and uninstallation phase as it was carried out manually.

DATA QUALITY

In the context of this study, the activity data are mainly of "primary type", i.e., collected with the support of the Company for the specific production site. Secondary data refer to specific databases or to the most updated technical reference literature, to ensure a good level of reliability. In this study the secondary data that were used concern the energy for installation phase, maintenance and the end of life of the product

REFERENCE PERIOD

The primary data collected in the context of this study refer to the year 2022.

STAGE

Upstream module:

- Extraction of raw materials and production of materials / semi-finished / accessory products;
- Packaging production;
- Transport of materials / semi-finished products / accessory products.

Core module:

- Manufacturing and assembling of the product. The electricity mix used for production was modeled with the Ecoinvent dataset relating to the average Chinese mix (Chinese consumption mix, in absence of data about residual mix);

- Production waste disposal and recycling;
- Distribution: transport of the product to the installation site;

- Installation: The activities included in this phase of the life cycle concern the construction of the photovoltaic system, including structural elements and connection to the electricity grid and disposal of packaging;

- Use and maintenance: the activity of ordinary maintenance of the system is considered, for the whole duration of their life cycle (30 years). The maintenance of the system consists in washing the panels once a year and in replacing the inverters at the end of their life after 15 years;

- End of life: The activities included in this phase are the decommissioning the solar system, including the transport of the modules to the disposal site (distance assumed 100 km); transportation of final flows to the disposal or recovery site.

Downstream module:

- End of life: The activities included disassembling the photovoltaic modules, including material and energy consumption required for this purpose.

In the module disposal scenario, the recycling percentages of the individual materials were obtained from the ENEA report, relating to the end of life of the photovoltaic panels. (recycling rate: 85% for silicon; 97% for glass, 100% for aluminium, 78% for copper).

REFERENCE SERVICE LIFE (RSL)

In this LCA study, functional to obtaining the EPD certification, a useful life was considered 30 years, in accordance with the provisions of the reference PCR.

IMPACT ASSESSMENT

The impact assessment follows the requirements of PCR EPDItaly 014 and uses the recommended impact analysis method for the calculation. Environmental impact indicators follow the characterization factors as reported in EN 15804:2012+A2:2019.
